Congratulations on the purchase of your VITALIS Remedy Maker.

Please read this Manual which will guide you in the functions and use of your device.

The Vitalis Remedy Maker is intended for Research purposes only. In no way can it replace medical advice or treatment. Please contact your healthcare professional for any medical concerns.

The Vitalis Remedy Maker DOES NOT “Diagnose or Treat”

INVENTORY

The following is a list of the items that will arrive in your parcel:

1 x Vitalis Remedy Maker

1 x 12 Volt DC Adaptor (country specific or universal sent)

1 x 3.5mm Cable

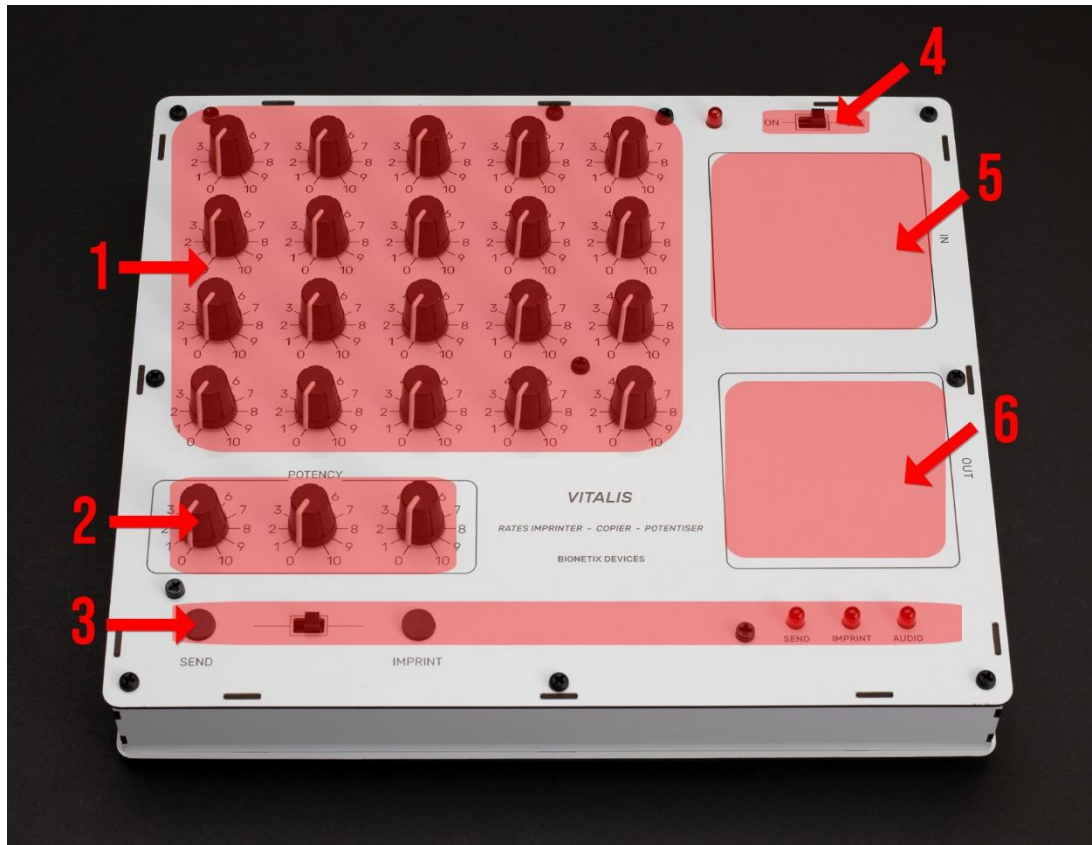

1 x EXT Plate (NOT Included, Sold Separately)

DEVICE LAYOUT

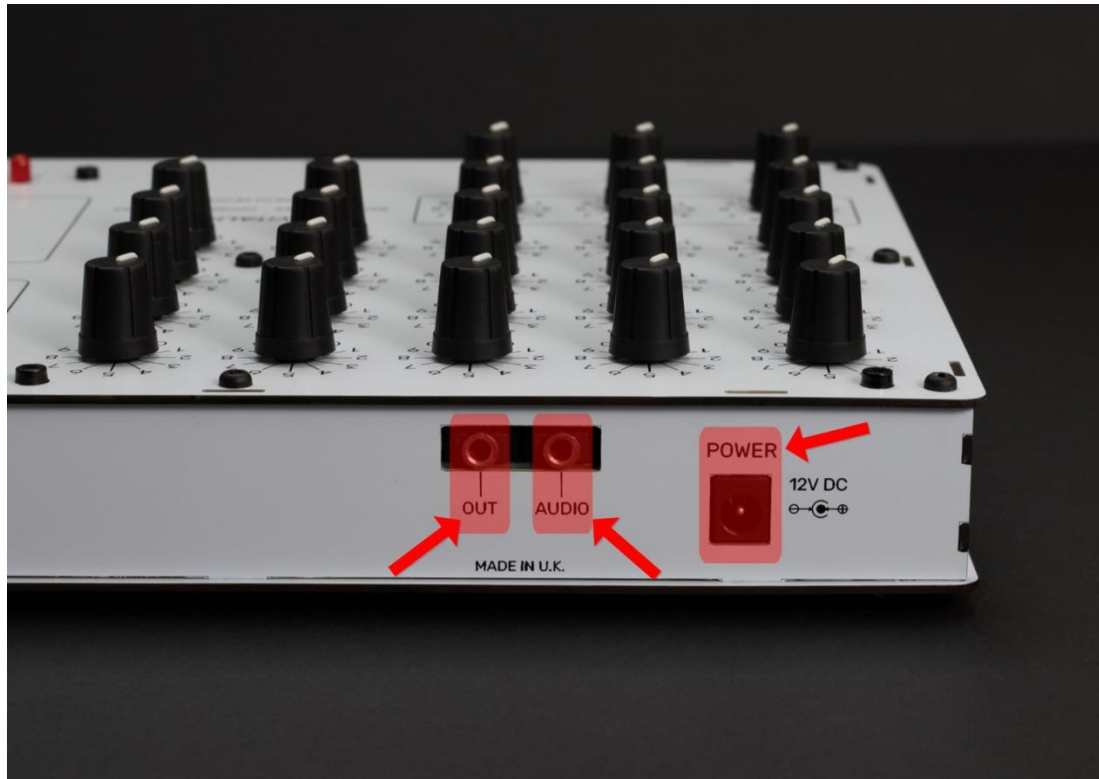

Front:

1. Set of 20 Dials for setting Rates
2. Set of 3 Dials for setting Potency
3. Controls and Indicators
4. Device Power ON/OFF Switch
5. Input/Sample Plate
6. Output/Remedy Plate

The Vitalis Remedy Maker is NOT waterproof and should be kept dry at all times.

Rear:

OUT, AUDIO & POWER SOCKETS as shown in the photo above.

FUNCTIONS OF THE DEVICE

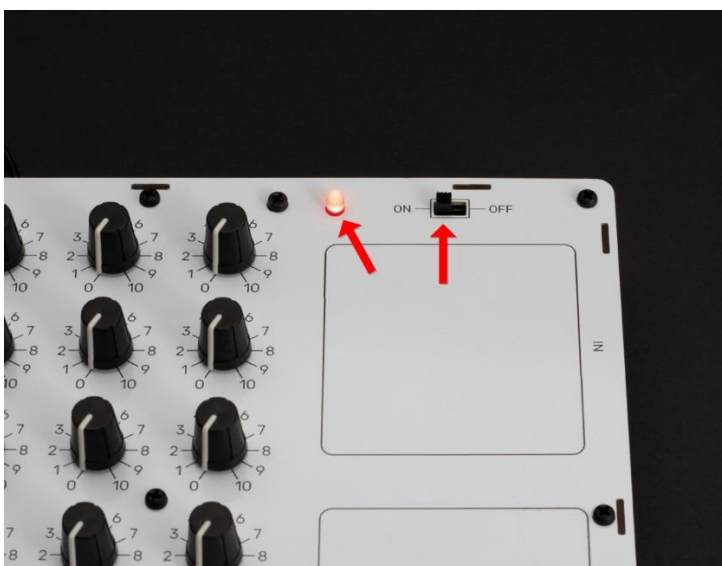

1. To prepare remedies from samples or from rates with or without potencies.
2. To prepare more than a single remedy at a time in the same potency.
3. To prepare remedies from audio files being played into the device.
4. To treat at a distance using a witness.
5. Preparing remedies from rates using our rates, from sources available online or from other manufacturers.
6. Using rates available for Base 10, Base 336 from online resources or any rates that number from 0 to 10 on each digit and a total of 20 digits.

LET'S GET STARTED

Start by connecting the jack end of the adaptor to the socket on the rear of the device marked “POWER 12V DC” as shown in the picture above.

Connect the adaptor to a power source in a wall socket (110V to 230V AC).

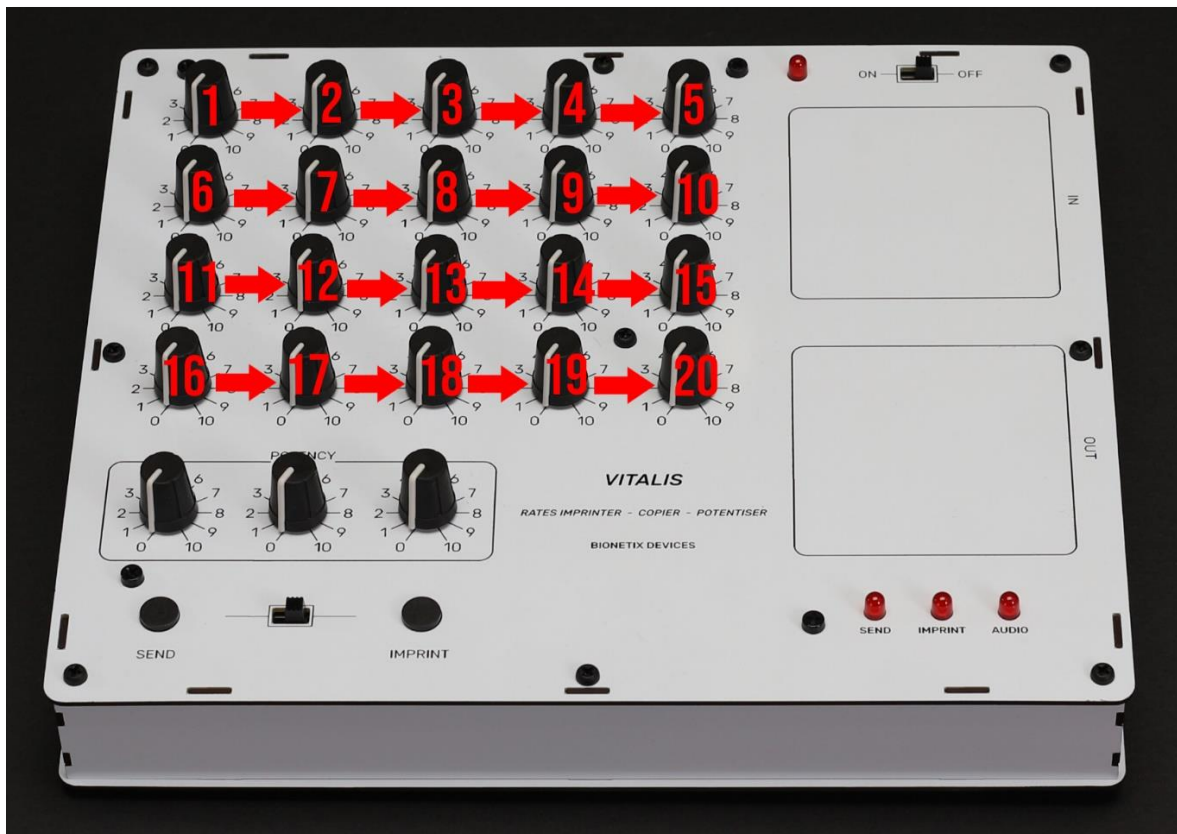

The device can now be powered on by turning the Power Switch to the ON position. This will be indicated by the red light as shown in the picture.

HOW TO PREPARE A REMEDY

IMPRINT MODE:

The Vitalis is supplied with a directory which has the rates under various categories to prepare the remedies. The Vitalis Remedy Maker is not limited to the rates supplied, it is versatile enough to accept rates from other manufacturers and those available online, including Base 10 and Base 336 rates.

The Device has 20 dials for setting the Rates. Set them in the numbered sequence as shown in the picture above.

After setting the Rates on the Dials, the next step is to set the Potency. The Device has a potency range from 1X to 100MM and includes the LM potencies too. In order to set the required Potency please refer to the table in the Potency Settings Chart. Each potency has the corresponding dial setting next to it. There are 3 dials for setting the Potency. Follow the numbered sequence as shown in the picture to set the potency.

Example:

In order to prepare a remedy please follow the steps listed below:

Plug the device and switch it on from the top right-hand corner by sliding the switch to the ON position. Enter the rate for Abrotanum which has the rate 98843, enter the 5 numbers from left to right, and top row downwards following the dials. The remaining 15 dials will be set to zero as shown in the photo below.

number 9 will be set on dial 1
number 8 will be set on dial 2
number 8 will be set on dial 3
number 4 will be set on dial 4
number 3 will be set on dial 5

To set potency go to the three potency setting dials as shown in the photo below.

E.g.: For a potency of 1X set 005 on the dials in the sequence below:

enter 0 on dial number 1
enter 0 on dial number 2
enter 5 on dial number 3

E.g.: For a potency of 1M set 265 on the dials in the sequence below:

enter 2 on dial number 1
enter 6 on dial number 2
enter 5 on dial number 3

Place the bottle in which the remedy is to be prepared with pillules, globules or water/alcohol which is known as the substrate, on the OUT plate of the device. The substrate or potentising medium used can vary according to the requirement. Water is the perfect medium and the first choice if the remedy being prepared does not require to be stored. If the remedy will be stored then add a dash of alcohol/vodka/gin in order to preserve it for longer since water breaks down over time.

Slide the switch below the Potency dials to the right towards the push button switch labelled IMPRINT. Gently press the button for IMPRINT. The light will turn on to indicate that the microprocessor is sending signals to the OUT plate for about 10 seconds. This will be followed by a soft beep sound to show that the process is complete.

Remove the remedy bottle from the OUT plate FIRST before making any changes to the rate and potency settings.

The material, colour or shape of the bottle used to prepare a remedy does not affect the remedy making process

The device has an auto-clear function incorporated. At the start of every Imprint or Transmit process a neutralising signal is sent out to clear all previous charges held by the IN and OUT plates.

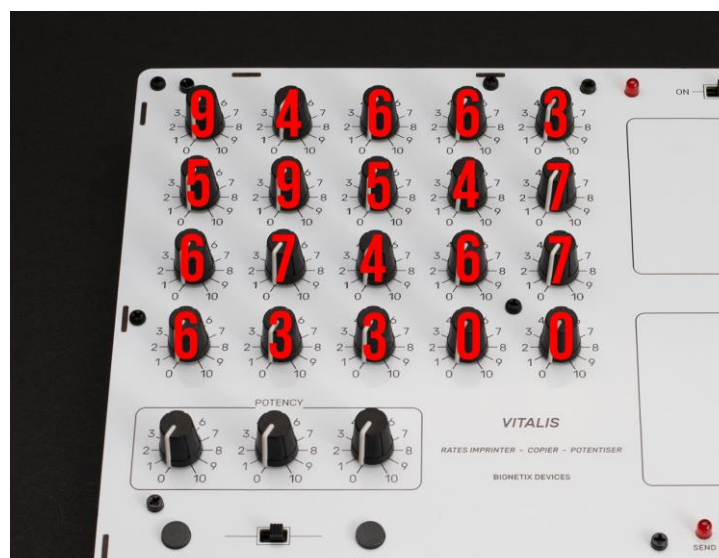

COMBINATION REMEDY MAKING – In a single potency

Vitalis is designed to prepare more than one remedy at a time in a single bottle of substrate.

E.g.: To prepare a combination of Abies Nigra (Rate: 946635), Absinthium (Rate: 954767) & Bryonia Alba (Rate: 467633), follow the steps listed below.

Set the dials in the following order:

- dial 1 will be number 9
- dial 2 will be number 4
- dial 3 will be number 6
- dial 4 will be number 6
- dial 5 will be number 3
- dial 6 will be number 5
- dial 7 will be number 9
- dial 8 will be number 5
- dial 9 will be number 4
- dial 10 will be number 7
- dial 11 will be number 6
- dial 12 will be number 7
- dial 13 will be number 4
- dial 14 will be number 6
- dial 15 will be number 7
- dial 16 will be number 6
- dial 17 will be number 3
- dial 18 will be number 3
- dials 19 and 20 will be set to 0

Set the potency setting on the potency dials and follow the steps for imprinting a remedy. All 3 remedies will be made in the same potency and imprinted on to the substrate. Remedies prepared in this manner will have a single potency.

In order to make a Combination of remedies with different potencies please read the section below.

COMBINATION REMEDY MAKING – In different potencies

To prepare a combination remedy with different potencies in one bottle, choose the remedy rate and set it along with the potency for the first remedy. Place a small amount of substrate in the bottle to be imprinted and follow the steps to imprint a remedy. The remedy is now ready and the bottle can be removed.

Set the next remedy rate along with the potency, place another bottle with a small amount of substrate in it and repeat the process to imprint a remedy. The second remedy is ready and the bottle can be removed.

This process can be repeated as many times as necessary. Finally mix all of the substrate in one bottle, this will be the Master bottle with all remedies in their individual potencies as one combination remedy.

Place the Master bottle on the IN plate, set the 20 rates dials to 0 and the 3 potency dials to 0. Place the substrate bottle on the OUT plate and press Imprint. At the end of the beep the combination remedy will be ready to use. The master bottle can be used anytime to prepare the combination again.

Always remove the substrate bottle from the OUT plate first after remedy is imprinted before moving any dials. Remedies cannot be imprinted on a previously imprinted remedy.

A Remedy CANNOT be prepared on a previously imprinted remedy.

PREPARING A REMEDY FROM SAMPLE/SPECIMEN

To make a remedy from a sample of sputum, blood, pus, gem stone etc., place the sample on the IN plate. In the imprint mode keep the rates dials on 0, set the potency, if a potency is not required then leave the three potency dials on 0. Place the bottle of substrate on the OUT plate and press Imprint. After the light turns off and the beep sound, the remedy from the sample is ready.

It is also possible to make a remedy from a sample and add a remedy from rates at the same time in the same substrate. In the imprint mode this can be done by placing the sample on the IN plate, setting the rate for the remedy on the dials and setting the potency as required. Press Imprint and again after the light turns off and the beep sound, the bottle of substrate on the OUT plate will have been imprinted with a mix of the sample and the remedy rates selected.

IMPORTANT: The 20 Rate Dials and the 3 Potency Dials have been calibrated from 0 to 10 and should not be forced beyond their scope of travel. Failure to comply with this simple instruction will disturb the calibration and will then result in erroneous rate and potency settings.

TRANSMITTING REMEDIES

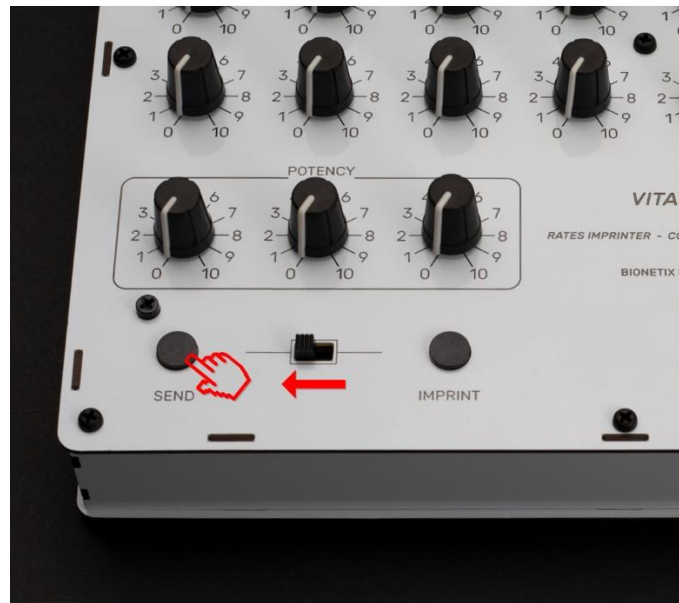

SEND MODE:

The Vitalis Remedy Maker is not limited to preparing energetic remedies only. The device is capable of transmitting the remedy signal to a Witness - the person to be healed, in any corner of the globe in the SEND mode. This method is also known as Broadcasting, Transmitting, Distance Healing or Remote Healing.

If the person who is to be healed is not present in person, then the SEND mode can be used to remotely treat that person. In order to do this a WITNESS of the person is required. A Witness can be in the form of a biological sample e.g., hair sample, nail clippings or a photo. If using a photograph please make sure that only the individual to be healed is in the picture and it is not a group photo.

Place the Witness on the OUT plate, set the rates and the potency of the remedy on the dials. Slide the switch below the potency dials to the left towards SEND.

Gently push down on the SEND button, this will activate the Send light along with the microprocessor to indicate the signals being sent to the OUT plate. The light will blink continuously to indicate that the process is ongoing. As the duration of broadcast is determined by the individual's requirement who is being healed, the SEND light will continue to blink with the remedy continuing to be broadcast until the process is stopped by pushing down gently on the SEND button again or by sliding the switch to Imprint. To begin with, a transmit session of 5 – 10 minutes is sufficient. The time duration can be increased or decreased depending upon the response and requirements. There is no one set rule that applies to all.

NEUTRALIZING REMEDIES

Remedies prepared on the Vitalis Remedy Maker can be neutralized using the following steps.

- Turn all Rates and Potency dials to 0.
- Slide the mode selector switch to the IMPRINT mode.
- Make sure the IN plate is empty.
- Place the bottle of remedy to be neutralized on the OUT plate.
- Press the IMPRINT push button.

Once the light turns off and beep sound is heard, the remedy will be neutralized and the bottle will contain no imprinted information any more. This is especially useful if a combination of many remedies is being prepared in order to make a Master sample. The bottles can be reused to prepare remedies again.

CABLE & SOCKETS

OUT SOCKET

This socket is used to prepare larger quantities of remedies by connecting the device to the EXT plate.

AUDIO SOCKET

The Vitalis Remedy Maker comes with an exclusive port for Imprinting audio frequencies into remedies. Audio files can be downloaded from the internet from various web pages. A few examples would be healing frequencies, healing chants or mantras, positive affirmations etc. These are examples of some audio files that can be used; however, we do not supply audio files, we have only provided the means to use them if required.

Connect the AUX cable to the Audio socket. Connect the other end to any HEADPHONE socket on your music device and play the audio file. The AUDIO light will turn on and flicker along with the music file being played. Please keep the audio volume on LOW to MEDIUM while playing the track into the device. If the Audio is played constantly at a high volume for an extended period of time, it may cause the device to overheat and turn off. Should this happen, turn the device off and disconnect from the power source and wait for about 20 minutes and restart the device. It should then be ready to go again, repeated failure to heed this may cause issues with your device and void your warranty.

To prepare a remedy from an audio file, set the device to the SEND mode and press the push button. When the audio file has finished playing, the remedy is ready and the push button can be pressed once again to end the process.

Since the audio files can be longer in duration, the send mode is used in place of Imprint which is fixed to 10 seconds.

Examples of Music players that can be connected are: Desktop PC, Laptop, iPod, iPad, Mobile Phones, MP3 Players, CD Players or any other device that has a headphone socket.

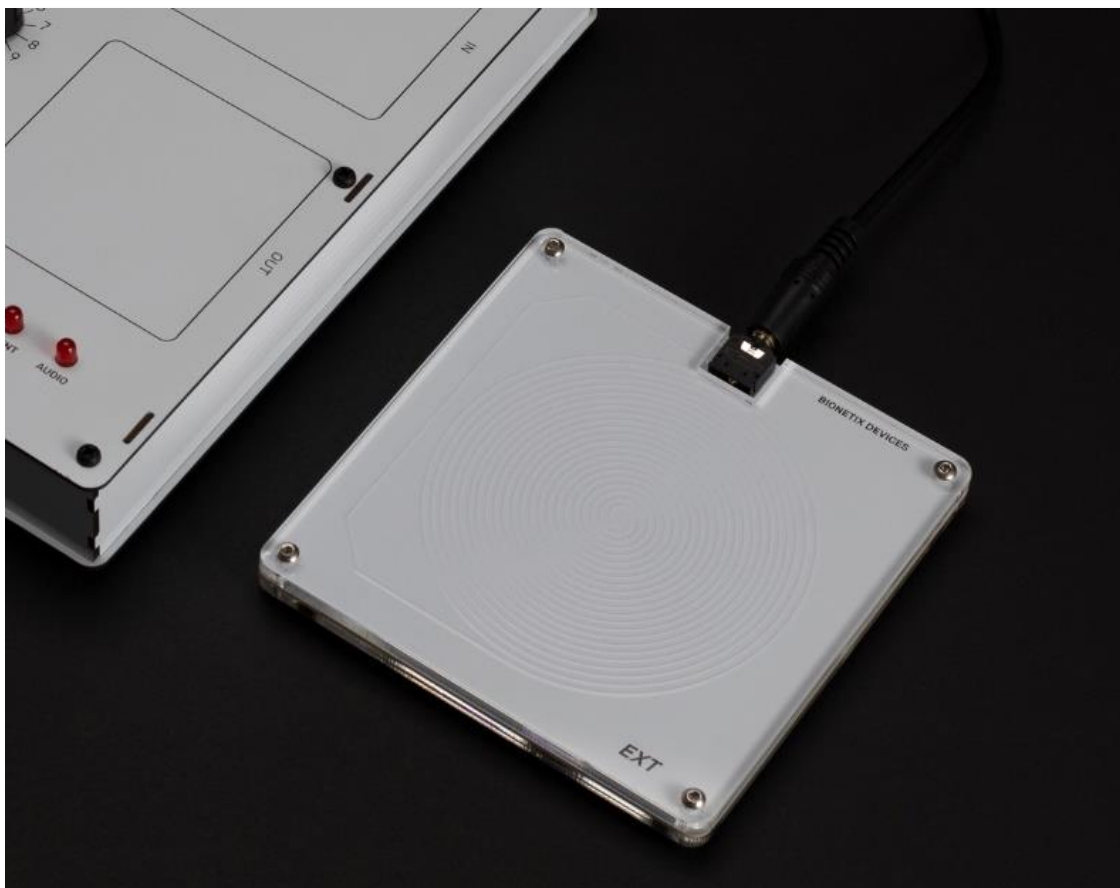

EXT PLATE

The EXT plate is attached to the Vitalis Remedy Maker using the 3.5mm cable. One end of the cable will attach to the device at the rear on the socket marked OUT and the other end of the cable will attach to the EXT plate. The EXT plate is ready to be used as an extension for preparing larger quantity of remedies.

Place the substrate to be imprinted on the EXT plate, set rates on the dials, followed by potency settings on the potency dials. Next, press the Imprint button and the remedy on the EXT plate will be ready at the end of the light turning off and the beep sound.

FINALLY

This brings us to the end of the user guide for the Vitalis Remedy Maker. We hope you have years of use with your device. Should you encounter any problems relating to manufacture, your device is under warranty to be repaired free of cost for the first 2 years from the date of purchase giving you complete peace of mind and assurance. Simply send us an email at infobionetix@gmail.com with your concern and we will guide you on how and where to send your device. We strongly suggest that the device is sent to us for any repairs. Please do not repair it yourself or from a local electrician.

If you have any further queries which may not have been addressed in this guide, feel free to contact us at the above email address and we will reply at the soonest possible opportunity.

Once again, we thank you for purchasing the Vitalis Remedy Maker from us and we promise to be there with you for any operational and repair support that may arise.

Good Luck!
